

# H- Minus™ Super Anti-Oxidant and Cell Cleanse

## What is it?

H- Minus™ is a mineral hydride formulated by a special process to time-release millions of extra electrons, known as negative ions, into your body. Negatively charged electrons neutralize the positive charge of toxic free radicals in your body. H- Minus™ is the most concentrated source of electrons ever developed; one quintillion per dose. The H- ions are stabilized in silica Nano Clusters® 2000 times smaller than blood cells.

## What does it do?

By providing electrons, it helps to replace our electron reservoir, which is high in children but declines with age. It tends to improve conditions in our body fluids that are critical to maintain a healthy environment for our cells. This reduces liver stress and assists in detoxification.

H- Minus™ is a special form of a time-release mineral hydride powder. Each molecule has an extra electron or negative ion. When consumed, it releases much-needed electrons into your body, improving the condition for the three following characteristics that make your body's **Biological Terrain** (cell terrain) healthy.

1. It will increase body pH – alkalize body fluids.
2. It neutralizes the positive charge of free radicals.
3. It increases electrical conductivity and detoxifies cells.

## Benefits

**Increases pH toward Alkaline** - Pollution, stress and our consumption of highly processed cooked foods will create acidic body fluids, a characteristic compatible with certain diseases. All cellular waste, and most internally generated toxins are acidic. H- Minus™ will increase body fluid pH to a less acidic, more alkaline condition. Thus many molds, fungus, bacteria, and germs cannot live in this more alkaline Biological Body Terrain.

**Increased antioxidant power** - Free radicals are compounds which have lost an electron and which tend to steal electrons from healthy cells, which can cause malignancy, loss of energy, accelerated aging and other diseases. Damaging free radicals are created by normal activities, but also from contamination of our food, air and water. A free radical is a positively charged molecule looking to take an electron from your body, organs, or DNA. The loss of your electrons is a part of the aging process. An antioxidant is a compound that gives up an electron to a free radical, making it harmless. Hydrogen is the smallest atom of all, and the H- Minus™ molecule is many times smaller than the large molecules of all other antioxidants. Yet each tiny H-™ molecule with H2 re-

leases one electron. One mg of H-™ gives up many more electrons than one mg of any other antioxidant. However, antioxidants work together. Vitamin C gives up an electron and becomes a weaker free radical. It then steals an electron from Beta Carotene that becomes a weaker free

radical and steals from Vitamin E. Even though H-™ is the only form of antioxidant known that does not become a free radical, it is important to continue to consume all forms of antioxidants in addition to H-™, as the most effective way to protect against free radical damage. Because H-™ is abundant with electrons, the H- Minus™ will continue to give electrons to the other antioxidants as they lose their electrons. This rectifies **the electron cascade, which no other anti-oxidant can do.** H- ions are also absorbed into the cells, which hydrates and detoxifies the body at a cellular level. Hydrogen hydrates cells and raises pH. H-™ is the first antioxidant small enough to enter brain capillaries.

**Electrical Conductivity** - Water without minerals will not conduct electricity. Messages from a cell to other cells are vital to their functions, but will not be transmitted if minerals are inadequate in the body fluids between and inside the cells. Because the soils and the vegetables we eat are often depleted of trace minerals, our body fluids will be low in the minerals necessary to transmit vital messages. This can lead to frequent fatigue, poor mental function, and other diseases. H- Minus™ adds to and enhances other mineral supplements to increase this neurotransmission and increased electrical conductivity in body fluids. H- Minus™ in drinking water can increase cellular absorption of nutritional molecules between 60%-200%. Cellular cleanse is extraordinary and can detox free radicals and heavy metals.

To add H- Minus™ to your daily nutritional regime, you may comfortably consume 1-2 capsules in 8-12 oz. of water 7 hours apart. The increased dose of 3 – 6 capsules per day may positively contribute to any health discomfort such as a cold, flu, or allergy by adding alkalinity to the body.

## Retail

60 300mg Vegi-capsules all vegetarian	\$29.00
50 gram H-™ powder w/500mg scoop	\$77.00

Call Robert Ray 720 290 5984 or Dyan Stein 970 382-9939

### Silica Particles Forming a Nano Cluster®

This nano-technology stabilizes negative ions in billions of tiny silica spheres. At a molecular level these spheres will nano-cluster (make spherical) long chain molecules like vitamin C and create enhanced cellular absorption.
